Ruby on Rails 5.x

Do início ao fim!

Desabilitando configurações padrão (generators)

Desabilitando configurações padrão (generators)

- Para gerar uma aplicação "sem testes" use
  - `rails new <nome> -T`

Desabilitando configurações padrão (generators)

- Ou, em config/application.rb

    - `require "rails"`
    - `# Pick the frameworks you want:`
    - `require "active_model/railtie"`
    - `require "active_job/railtie"`
    - `require "active_record/railtie"`
    - `require "active_storage/engine"`
    - `require "action_controller/railtie"`
    - `require "action_mailer/railtie"`
    - `require "action_view/railtie"`
    - `require "action_cable/engine"`
    - `require "sprockets/railtie"`
    - `# require "rails/test_unit/railtie"`
    - `config.generators.system_tests = nil`

Desabilitando configurações padrão (generators)

- Se necessário, pare o Spring
  - `spring status`
  - `spring stop`

"Spring is a Rails application preloader. It speeds up development by keeping your application running in the background so you don't need to boot it every time you run a test, rake task or migration."

Desabilitando configurações padrão (generators)

- Customizando seu workflow
  - https://guides.rubyonrails.org/generators.html#customizing-your-workflow
